

towed spreader **MINI**

Application

The MINI towed spreader is used for salt spreading on smaller traffic and pedestrian surfaces such as sidewalks, park and cemetery paths, etc.

Description

The MINI towed spreader is designed for towing with smaller vehicles or smaller tractors. It consists of:

- spreader housing with 0.6 m³ capacity and 1000 mm spreading width;
- protective mesh on the container (prevents the entry of large pieces of spreading material into the container);
- wheels with an activation and deactivation mechanism;
- dosage regulation system;
- roller with plates for material scooping;
- light signaling installation;
- Ø50 mm towing hook attachment.

The spreader is operated using the activation mechanism on the drive wheels.

The spreading dosage is changed by changing the pressure exerted by the spring on the mechanical bottom of the spreader.

MODEL	Container capacity (m ³)	Mass (kg)
MINI 1000	0,6	170

Additional equipment

On customer request, the spreader can be delivered with the following additional equipment:

- cover tarp (protects the spreading material from weather conditions)
- wheels with filled tyres

Installation

The spreader can be connected to any vehicle with a standard Ø50 mm towing hook. A swivelling towing eye can also be installed on customer request.
